

DuraLabel®

How to Apply a Label Using EZ-ON*

You will need:

EZ-ON Label Application Solution, isopropyl alcohol, lint-free towel or cloth, squeegee

*EZ-ON Label Application Solution is not for use on reflective vinyls as the reflective material contains metal flakes that may rust.

1 In order to prepare the surface which the label will be adhered to, apply Isopropyl Alcohol (rubbing alcohol) to a lint-free towel or cloth and wipe the desired surface until clean. Wait 5 minutes to allow the Isopropyl Alcohol to completely evaporate before applying.

Peel the label from the backing (it is easier to peel the label from the backing than to peel the backing from the label).

Spray the back side (adhesive side) of the label from a distance of 14" with EZ-ON Label Application Solution, coating evenly so that there is a nice sheen.

Apply the label onto the surface. You should be able to slide the label around to position it correctly.

Use the squeegee to gently squeeze out the excess EZ-ON and remove any bubbles or wrinkles.

Gently wipe the excess EZ-ON from the edges of the label with a clean towel or cloth.

For pipes the process is the same, except that a cloth is used to smooth out the label instead of a squeegee.
