

# DuraLabel®

## How to create a Shadow Board

### You will need:

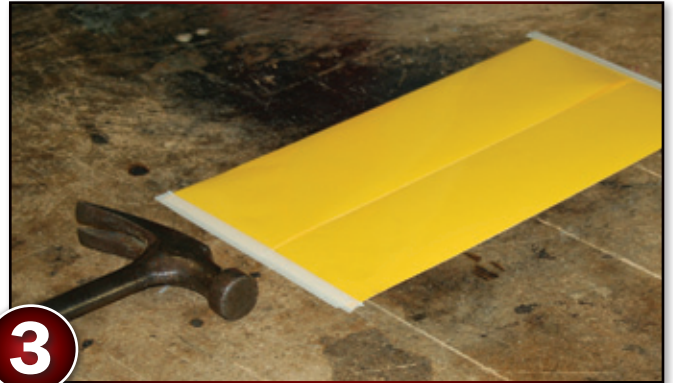

Labeling supply,  
masking tape, Sharpie®  
type pen & scissors.

**1** Select the color and type of DuraLabel Supply you would like to use as a shadow label for your tools.\*

**2** Cut one length of supply so it will span your tool's largest dimension (W or L). If the tool's smallest dimension is greater than the width of the supply, cut additional strips so the tape will span the tool's smallest dimension (W or L).

**3** If multiple lengths are required, lay them side-by-side on a flat and sturdy surface so the appropriate edges meet. Apply strips of masking tape across the top and bottom edges of the tapes so they remain together and attached to the underlying surface.

**4** Once the group or individual length of tape is properly aligned, position the tool on-top so no edges extend beyond the supply.

**5** Gently press down on the tool with one hand and use the pen to trace the outside contours of the tool onto the supply.

**6** Using scissors, cut just inside the penned outline until the entire shadow of your tool is cut out.

**7** Apply the shadow label directly behind the tool's storage location. If multiple lengths of vinyl were required, tile the lengths so all outside edges nicely match.

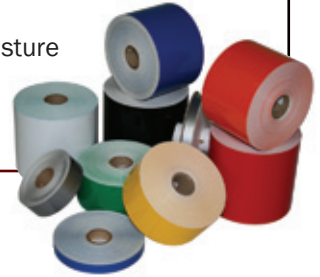

\*DuraLabel Premium Vinyl Tapes make an excellent supply for shadow labels on most surfaces, but other supplies such as Phosphorescent Tapes (glow-in-the-dark) may be used. See opposite side for suggestions.

## DuraLabel Shadow Board Supplies

DuraLabel supplies come in a variety of widths and colors. With tapes up to 24" in width, we have the supply to meet your shadow board and labeling needs. Choose from over 30+ standard colors plus many special order colors for color-coding.
